

4.	(C)	increased revenue for the government.
		Explanation
		Import quotas and voluntary export restraints, unlike tariffs, do not necessarily generate tax revenue. The other choices describe effects that result from tariffs quotas, and VERB.
		(Study Session 4, Module 13.2, LOS 13.e)
		Related Material
		Schweser Notes - Book 1
5.	(C)	private saving.
		Explanation
		Other things equal, increasing savings would decrease a current account deficit while increasing a government budget deficit or domestic investment would increase a current account deficit.
		(Study Session 4, Module 13.2, LOS 13.i)
		Related Material
		Schweser Notes - Book 1
6.	(C)	The costs of trade primarily affect those in domestic industries that compete with imports. Explanation
		The benefits of trade are greater than the costs for the overall economy, but those
		in domestic industries competing with imports may suffer costs in the form c reduced profits or employment.
		(Study Session 4, Module 13.1, LOS 13.b)
		Related Material
		Schweser Notes - Book 1
7.	(C)	Trade with low-wage countries depresses wage rates in high-wage countries.
		Explanation
		Trade with low-wage countries does not in itself depress wage rates since productivity must be considered. The other arguments have some support among economists.
		(Study Session 4, Module 13.2, LOS 13.e)

J.K. SHAH ONLINE

8. (C) free trade area.

CFA®

Explanation

A free trade area removes barriers to trade among its members but does not require any of its members to change their trade policies with non-members. A common market and a customs union both impose uniformity on trade rules with non-member nations, which could restrict a member's low-cost imports from a nation that is not a member.

(Study Session 4, Module 13.2, LOS 13.f)

Related Material

Schweser Notes - Book 1

9. (A) reduce the volatility of domestic asset prices.

Explanation

Reasons commonly cited by governments for imposing capital restrictions include reducing the volatility of domestic asset prices, maintaining control of exchange rates, keeping domestic interest rates low, and protecting strategic industries from foreign ownership.

(Study Session 4, Module 13.2, LOS 13.g)

Related Material

Schweser Notes - Book 1

10. (C) benefits the Japanese government and domestic producers. Explanation

The Japanese government's action is an example of a tariff A tariff is a tax imposed on imports and benefits the Japanese government because it collects the tariff. Domestic producers benefit because the reduction in the supply of imported goods means a higher domestic price.

The other choices are incorrect. A tariff is considered less harmful than a quota (an import quantity limitation) because under a quota, the domestic government does not receive any funds as it would under a tariff (the foreign producers receive the revenue transfer). In the long run, trade restrictions do not protect the net number of jobs in the country. The number of jobs protected by import restrictions will be offset by jobs lost in the import/export industry. Import/export firms will be unable to sell the overpriced domestic products abroad or import and sell the lower priced restricted foreign-made product.

(Study Session 4, Module 13.2, LOS 13.e)

Explanation

To produce a unit of cloth, Country A must give up 4/14 = 0.29 units of corn, while Country B must give up 8/16 = 0.50 units of corn. Therefore Country A has a comparative advantage (i.e., a lower opportunity cost) in producing cloth.

To produce a unit of corn, Country A must give up 14/4 = 3.5 units of cloth, while Country B must give up 16/8 = 2.0 units of cloth. Therefore Country B has a comparative advantage in producing corn.

Note that this question gives output per unit of labor. In other questions you may see labor hours per unit of output. For this question that would be 1/14 units of labor per unit of cloth and 1/4 unit of labor per unit of corn for Country A, and 1/16 unit of labor per unit of corn and 1/8 unit of labor per unit of cloth for Country B. No matter how the data are presented, just focus on the trade-off, what each country must give up of one good to produce one unit of the other good.

51.	(B)	a nation will benefit from trade when it imports goods for which it is the high cost
		producer and exports goods for which it is the low-cost producer.
		Explanation
		This statement is the law of comparative advantage.
		The other choices are incorrect. The law of comparative advantage supports
		international trade. According to the law of comparative advantage, both trading
		partners are better off if they specialize in the production of goods for which they are
		the low-opportunity cost producer and trade for those goods for which they are the
		high-opportunity cost producer. Mexico is considered to have an absolute advantage
		in plastics if Mexico can produce plastic using fewer resources than the U.S.
